

NEAR INFRARED LIGHT THERAPY

Non-Invasive Fat Removal & Weight Loss, Body
Sculpting, Pain Relief, Improved Circulation, and
much more... Light Therapy can do it all!

The LipoMelt, near-infrared light therapy system uses a bed, or in some cases, light pads, to safely and efficiently remove fat and sculpting the body. The system eliminates fatty substances from the body without damaging or removing adipose (fat) tissue.

Adipose tissue is a critical component of the body's endocrine system, which is responsible for maintaining proper metabolic balance.

Unlike Liposuction, Cool Sculpting, or other forms of fat removal, near-infrared light therapy does not destroy or remove fat cells, but rather it causes the membranes of the fat cells to become porous, allowing the fatty substance contained within the fat cells to "leak" out and be absorbed by the body. This substance is then processed by the liver and expelled from the body as a waste product.

Near-infrared light fat removal is permanent. There are no side effects, no pain or discomfort, and a single 20-minute treatment removes approximately four pounds of fat. This is an excellent way to kick-start a weight reduction program!

The Non-Surgical Face Lift Using Light Therapy

These before and after photos show the results of our non-surgical face lift using the LipoMelt near-infrared therapy unit. Utilizing a floor standing unit with lighted pads, you can target specific areas of the body for tightening, contouring, and elimination of sub-dermal fat. This creates more youthful look without invasive and painful surgery!

Near-Infrared Light Therapy for Pain Treatment

Near-infrared light therapy has proven to be highly effective in the treatment of many chronic pain conditions, including diabetic neuropathy.

Through regular treatments with light therapy pads and beds, our system has helped patients with chronic pain stemming from arthritis, injuries, neuropathy, and other comorbidities. Our providers clinics have helped patients overcome many other conditions such as: Restless Leg Syndrome, liver disease, DVT, and a multitude of other conditions.

Light therapy continues to be tested as a treatment for a wide range of conditions, and is quickly proving to potentially be one of the most exciting breakthroughs in medical science.

Learn How Your Practice Can Become an Authorized Light Therapy Provider through Shephard Group Healthcare Partners!

Whether you choose to serve as a weight-loss, fat reduction, and aesthetics clinic, or you choose to help patients with chronic pain - or both, you will have a protected, exclusive territory, and earn a 7-figure annual return as an authorized provider and partner! Contact us today to learn more.
